Dear Ms. or Mr. ,

I am writing in response to the campus recruitment posted for software engineer position (2018 new grad) with your team. As a second-year master student who majors in computer engineering in Duke University's Pratt Engineering School, I feel confident that I am the right person to work with this program and accomplish the job successfully.

I have already earned a bachelor's degree in electrical engineering and also have had some short-term work experience in industry and taken part in some core projects in the companies during the last two summers.

I laid solid foundation in computer science fundamentals including algorithm & data structure, C/C++ programming and also computer system & architecture knowledge and skills which required for a software engineer in my first semester in grad school. During the second semester, I not only applied the knowledge above into the course projects, but also explored some big data framework & tools, mobile application development out of interest and implemented some projects for demo and for open source community.

I presented a strong passion for accepting new challenges and aptitude for learning new technologies, and also a proven track record of solving difficult problems and meeting aggressive goals. In my last internship experience in a startup company, I independently led and finished a project which would be comprised of the company's core service system. I had done a lot of research and experimental work for that with very limited help and hard deadline pressure.

I always feel like sharing the knowledge and experience I have about technology with friends and families in life. Also in work I was comfortable communicating with technical and non-technical employees throughout the company and clients throughout various kinds of professional fields in order to complete projects and achieve organizational goals.

Overall, I feel that combined my ability as an engineer and my enthusiasm for technology with your requirements for this job makes me the ideal candidate to meet your needs. I would be glad to discuss the opportunities with you in more detail if you are interested.

Thanks,

Amber Wang
